Art Unit: 1623

Claim 36 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no disclosure in the specification as originally filed, in treating an individual who does not have an atherosclerotic condition.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims .12, 13, 21, 29 and 32-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Petyaev (WO 03/017992) in view of Ruggeri et al (U.S. Patent No. 6,369,071)..

Petyaev discloses the treatment of atherosclerosis with a combination of azithromycin and a metal chelator such as aspirin (page 10). Ruggeri et al disclose that a patient in need of apolipoprotein-B secretion inhibition is a patient having a disease or condition such as atherosclerosis, hyperlipidemia and hypercholesterol (column 23, last two lines and column 24, lines 1-10). Therefore, a person having ordinary skill in the art at the time the claimed invention was made would have been motivated to administer the combination disclosed by Petyaev to a patient having artherosclerosis or hypercholesterol and thereby reduce levels of apolipoprotein- B.

Applicant's arguments filed July 9, 2009 have been fully considered but they are not persuasive.

Applicant contends that the mechanism of the treatment of atherosclerosis described by Petyaev is a reduction in lipoprotein peroxidation. Applicant also contends that Ruggeri et al teach that inhibition of apoB secretion typically results in lowering of plasma concentrations that contain apoB, such as LDL. This argument has not been found persuasive. On page 3, first paragraph of the specification it is stated that individuals having hypercholesterolemia may have elevated levels of apo-B and/or total cholesterol. Based on the teachings by the prior art, a person having ordinary skill in the art at the time the claimed invention was made would have been motivated to treat individuals having hypercholesterolemia with the combination of azithromycin and acetylsalicylic acid disclosed by Petyaev. The reduction of apo-B levels in the absence of reduction of LDL levels would have been inherent in such an administration.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 1623

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
